

Capital Finance Litepaper

Abstract

Capital finance will bring a revolution in the world with Blockchain Technology. Our concept is unique which we have integrated into our Decentralized Finance, as you are aware of crypto world got huge attention in the last few years and it is growing day by day with new developments into one of the world's major field i.e. finance, business and investment

Disclaimer

This document is issued by Capital finance. It's a conceptual paper that is released to form the economic basis for the development and growth of a crypto-economic token i.e, Capital token. Nothing in this litepaper or any of the proposals or information set out herein or materials or in any papers referred to shall form the basis of any contract between Capital finance (or any of its holding companies, associated undertakings or subsidiaries, controlling persons, or any of its respective officers, directors, representatives, employees, agents, partners or advisors) and any other person whatsoever.

Without limitation to the foregoing, no warranty, representation, or undertaking, implied or express, is made and no responsibility is accepted by Capital finance as to or to:

- A.** The accuracy or completeness or otherwise of this document or the proposals, information, or formulae set out in this document (whether expressly or via a link to other material on our website).
- B.** The reasonableness of the assumption (whether implied or express).
- C.** The accuracy of any predicted or unpredicted behavior of any function, algorithm, or system contained therein, without limitation, in respect of concerning performance, future funding needs, or limitations in the performance of any ledgers or systems described herein.

Introduction

DeFi (Decentralized finance) is a fast-growing sector of the cryptocurrency world. While crypto coins are providing a decentralized store of value separated from any government backed fiat currency, DeFi is creating decentralized financial instruments that is separated from traditional centralized institutions.

Although DeFi industry is small when we compared it to the global economy, DeFi has seen massive growth in 2020. In early 2019, the crypto collateral locked in the DeFi economy was only \$275M. By February 2020, the number had grown to \$1B, and it will continue to grow impressively in coming years, hitting \$2.5B in early July, \$3B by mid-July, and \$4B on 25 July. This growth shows that DeFi is getting huge support and attention from the crypto community, but it's still a small enough sector that many outside the industry may not have heard of DeFi yet. So, let's check what is DeFi, and why it is attracting crypto investors.

DeFi: What and why?

To be considered DeFi, a financial platform should have several or at least one decentralized function. These often take the form of using DLT - distributed ledger technology. Instead of keeping records in a centralized fashion; decentralized governance of the platform give control in the hands of the token holders rather than any ruling board. It uses algorithms and decentralized information feeds to calculate

things such as interest rates and currency values. Several DeFi platforms take the form of a decentralized application, known as dapps. To automate financial transactions dapps utilize a series of smart contracts, making them faster, affordable, and efficient than other centralized competitors. Additionally, dapps are governed by computer code, that is inherently neutral so there is no issue of bias. Automation is allowed for some financial instruments, not seen in the centralized financial sector. Its example can be “flash loans” which is a unique form of loan that must be taken out and paid back within a single transaction, allowing the user to borrow funds, trade or convert them across other platforms, then pay back the borrowed amount, all in moments. Professional traders can make a fast profit and use this to take advantage of market fluctuations.

Is it not interesting DeFi is giving people more control over their money, and several interesting ways to use it. The centralized financial industry has long excluded people of modest means and increased the wealth gap by reserving the best instruments for those with more investment. Many DeFi projects have a mission to make trading and investment more accessible, with lower minimum investments and platforms which are easy to use from any smartphone with an internet connection, regardless of your geographical location.

Project Overview

Capital Finance is set to become the world's best administrators of this new financial system to make the world a better place. The defi cryptocurrency space was a Minefield, however, Capital Finance was developed to provide users with the option of creating a decentralized wallet for trading, swapping, farming, staking and so much more.

CAP Farming: Capital Finance is a generalized, configurable, and 100% Decentralized platform for yield farming. This will allow token holders who provide Uniswap liquidity the ability to farm additional tokens out of a pool funded by Capital Finance. Farming is a core component driving the current defi frenzy, Capital Finance will have a range of pools for users and will incorporate insurance services for optional peace of mind. Capital Finance secures a suite of products and services and will become the industry standard.

Cap Staking: The users of the Capital Finance system are presented with a great opportunity of earning great rewards simply by staking their crypto assets over some time on the system. Staking of tokens on the Capital Finance platform does not take away control from the user because is a decentralized system, rather it ensures that the users actively take part in the affairs regarding the functioning of the system, maintaining full control and custody of their funds. The profit realized from the system and after subtracting a small percentage of the profit (for maintaining the system), the funds will be utilized to give staking rewards to the users who are participating in the staking activity. Capital Finance staking platform is currently live and providing fixed returns of 100 percent a year,

Project Overview

- ❖ **CAP Farming**
- ❖ **Staking**
 - **Returning 0.27% a day**
 - **8.3% a Month**
 - **100% Yearly**
- ❖ **Cap Swap**
- ❖ **Insurance**
- ❖ **Launchpad**
- ❖ **Trading**

Cap swap: It will be recognized by projects for gaining an instant seal of approval and by users for offering them the protection that has for so long been absent.

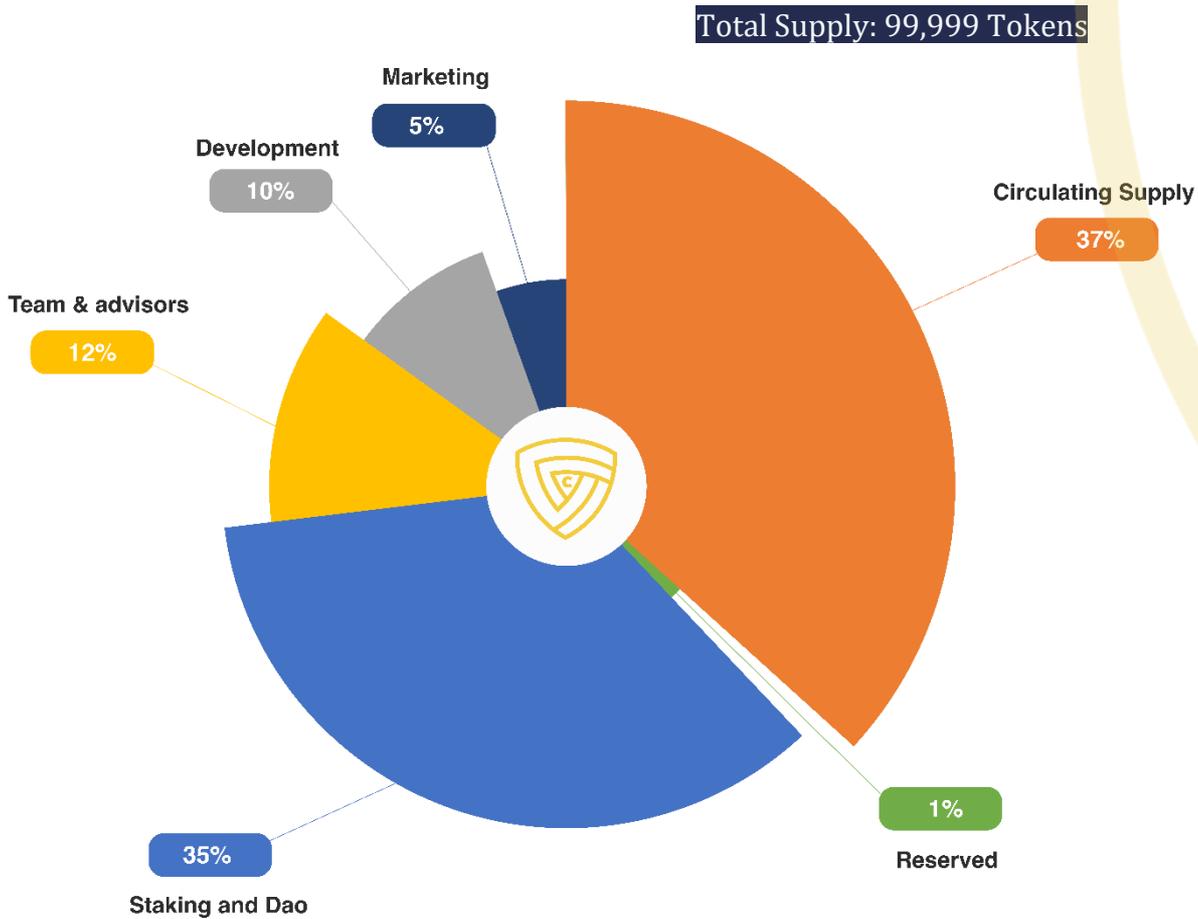

What makes our platform unique and highly secure is that Capital Finance records its transactions using blockchain technology, which verifies information across the public ledger network, users do not need to deposit before they can trade or carry out any transaction. This is to help ensure complete transparency and safety of our user's fund. Another thing that differentiates Capital Finance from other platforms is the option to escrow their assets through smart contracts and thereby only exchange successfully when all requirements are met, hence eliminating all risks from both parties.

We also have an added advantage of locking the liquidity for user protection, all team and adviser tokens will be placed in time locks smart contracts. Tokens will be distributed monthly and transparently. All smart contracts will be audited to guarantee safe and secure code now isn't that a breath of fresh air? as a full defi protocol a range of services does not end.

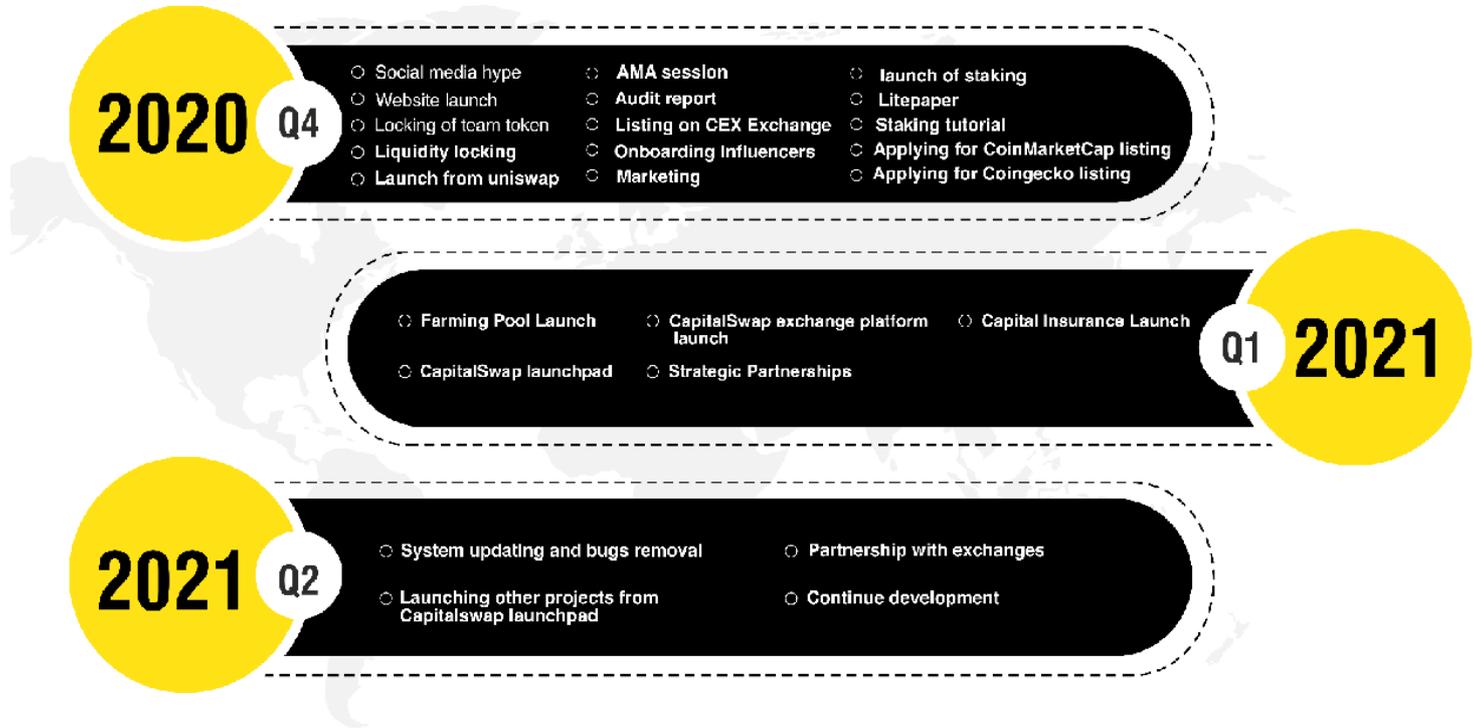

Token

Token Name	Capital
Token Abbreviation	CAP
Total Supply	99,999
Token Network	ERC20
Token Decimal	18

RoadMap

Team

Joseph

Joseph is Developer works on community building and ecosystem development. Previously he worked in software company as lead technical Engineer. his expertise includes blockchain technology, data centers and technical operations.

Email: developer@capitaldefi.finance

Smith

Smith has over 5 years of experience in building marketing teams and marketing strategies that have delivered successful geographic expansion in a range of industries and market.
